British Columbia Population Projections

The demands for public services, such as schools, hospitals and roads, are closely related to population size and characteristics. In addition, marketing strategies of businesses are greatly influenced by the size and structure of the population. As a result, reliable population projections are an essential tool for planners in both the private and public sectors.

As we head toward the next century, British Columbia faces unique challenges within Canada. Some of the major issues emerging in our province include how to deal with strong population growth that will put even greater pressure on our urban communities, our environment and government resources; a changing ethnic make-up of the population requiring a greater understanding of the values of cultural diversity; a health care system that must meet the needs of a growing and aging population; and growing economic and income disparities between our province's regions and people.

The following are some demographic highlights from PEOPLE Projection 25:

The British Columbia population is getting larger and aging. Between 1999 and 2026, the population will have increased by almost 43%. The median age of the population will have increased from 37.0 to 43.8 years.

Figure 1
British Columbia Population

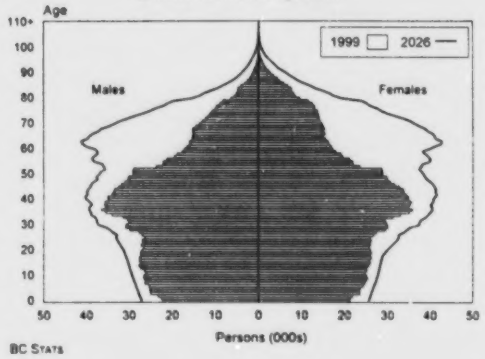

Figure 2
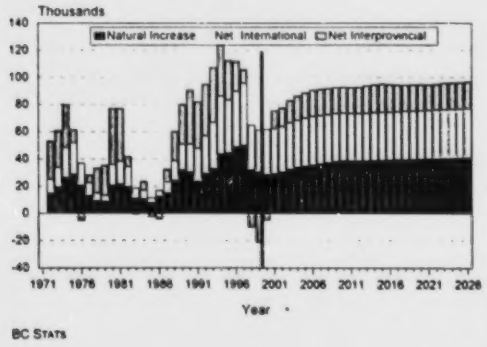
Components of B.C. Population Change



The major factor driving population growth will be migration to British Columbia. International migration will account for 59% of the population gain, followed by interprovincial migration at 28%, and natural increase (births minus deaths) at 13%.

Figure 3
British Columbia Births and Deaths

Even though the number of births in British Columbia will continue to rise, the contribution of natural increase to the overall population growth will decrease. Near the end of the forecast the number of deaths will exceed the number of births.

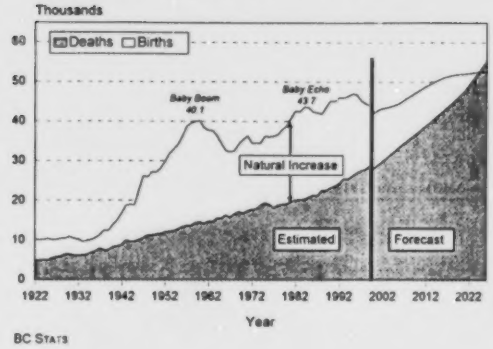


Figure 4
B.C. Population 5-19

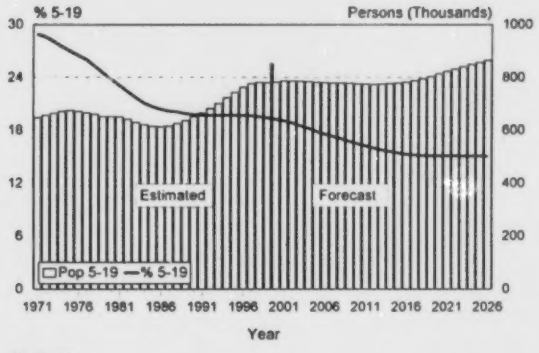

Figure 5
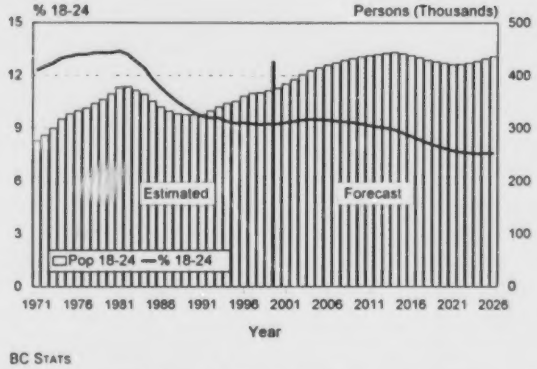
B.C. Population 18-24



The population of school age (5-19 years) will remain relatively constant over the next 15 years, although its share of total provincial population will decline. However, the population of post-secondary school age (18-24 years) will continue to increase over the next decade.

Figure 6
B.C. Population 25-34

The population aged 25-34, which is generally associated with first time household formation, is expected to dip due to net out-migration in the short-term, but will rise once again as migrants return to the province.

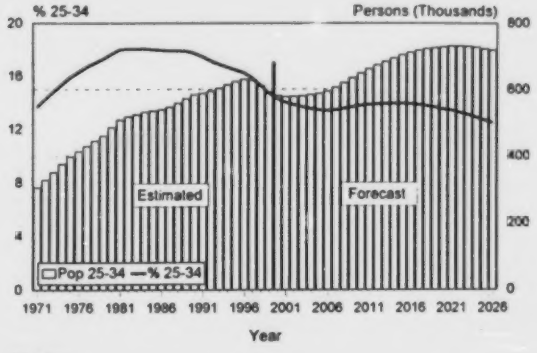


Figure 7

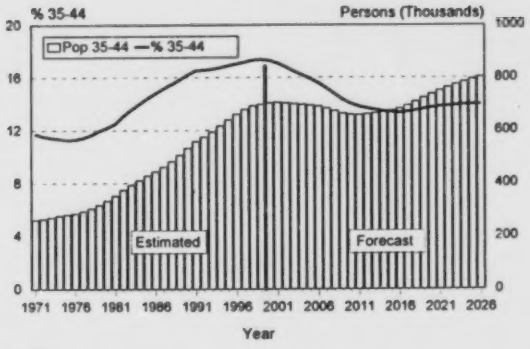
B.C. Population 35-44



BC STATS

The population of mature labour force age (45-54 years) went through a period of slow growth for a couple of decades, but in the last ten years this trend has changed. Baby-boomers are beginning to enter this age group, and as a result, the population is increasing significantly. This will have repercussions on the labour force, especially in terms of career goals and whether or not they can be met with so many people competing for a limited number of higher level jobs.

Both the share and overall population of retirement age (65+) will continue to increase significantly from 12.9 per cent in 1999 to 21.3 per cent in 2026. The same will be true for the very senior population (80+), which will grow from 3.1 per cent of the population to 4.8 per cent. This increase will have a serious effect on health care expenditures given the high per capita health costs associated with seniors.

The population currently aged 35-44 represents the bulk of the baby-boom cohort. The population in this age group is expected to fall slightly over the next ten years, then return to strong growth.

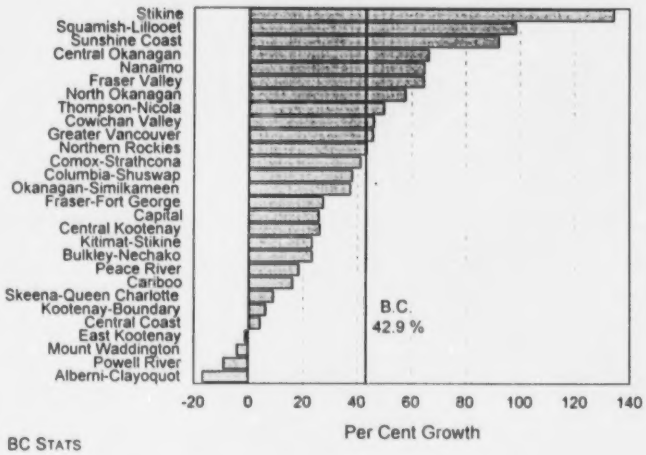
Regional Population Projections

There are substantial disparities with respect to projected growth among the 28 British Columbia Regional Districts. Areas in the southern portions of the province will likely see much higher growth rates than regions in the north. One of the reasons for this is that the economic base in the northern regions is far more resource dependent than the Lower Mainland, the lower portion of Vancouver Island, and the Okanagan. The regions that are expected to experience a decline tend to be those that are heavily dependent on resource extraction industries. The Stikine Region is a notable exception to the rule. The reason for the projected growth is the expectation of increased activity in the forest sector.

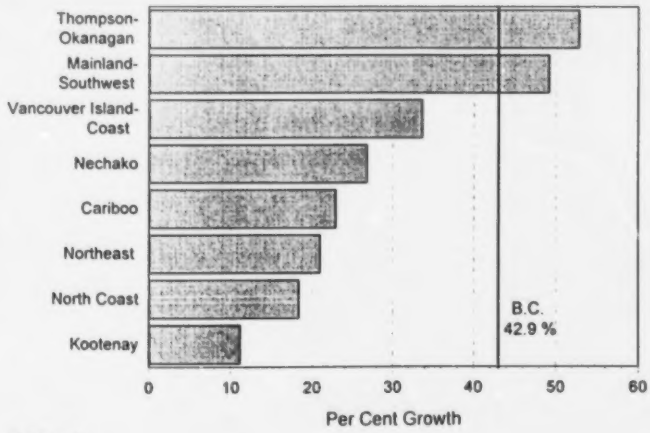
Figure 11
PEOPLE 25 Regional District Population Growth
1999-2026



BC STATS

Figure 12, depicting growth by Development Region, shows more clearly the inclination toward the southern regions when it comes to growth. Both the Thompson-Okanagan and Mainland-Southwest regions are expected to experience around 50 per cent growth over the 1999 to 2026 period. The slower growth in the Kootenay region is largely due to the depletion of coal reserves and the anticipated shutdown of various mines in the East Kootenay area over the length of the projection.

Figure 12
PEOPLE 25 Development Region Population Growth
1999-2026



BC STATS

There are regional differences with respect to age as well. Currently, the population 65 and over as a per cent of total population is much smaller in most of the remote areas, and greater in the more populous regions in the southern portion of the province. This is largely a combination of the greater access to services (particularly those related to health care) in the larger centres, and the more pleasant climate of the southern regions, which attracts the elderly looking for a place to retire.

The Regional District chart in Figure 13 indicates that some regions will experience proportionately larger increases in the per cent of population over 65. In many of these cases, this is the result of differential rates of migration to or from an area. Migrants tend to be younger than the population at large. Hence, in regions of high net inflows of population the aging process is slowed. Alternatively, where there is a net outflow, population aging accelerates.

On a larger scale, the Development Regions show a similar pattern of a more aged population in the south; however, the regions to the north will see proportionately larger increases in the proportion of the population over 65, particularly in the first 15 years of the projection.

British Columbia

P. E. O. P. L. E.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 0: BRITISH COLUMBIA

GENERAL ECONOMY

Although the services sector is the largest component of British Columbia's Gross Domestic Product, the Province is still heavily dependent on natural resource industries. When inter-industry linkages are taken into account, the resource sector is still responsible for at least one quarter of the jobs in British Columbia. Forest-based industries form the most important segment of the Provincial economy. Virtually every community in the province relies to some degree on the industry. Of all manufacturing industries in B.C., wood industries rank first, followed closely by the paper and allied industries. These two industries combined account for almost one half of all manufacturing in British Columbia. Mining is another important resource industry for British Columbia. Coal mining is the most significant activity in the East Kootenay Region, and oil and gas exploration is the major economic driver of the Peace River and Northern Rockies Regions. In addition, there are a significant number of metal mines in the Province. Copper is by far the most important metal mined in British Columbia. Metal manufacturing is a significant activity for some communities, particularly Trail and Kitimat where there are large lead-zinc and aluminum smelters respectively. Other significant resource industries are agriculture and fishing. Agriculture in B.C. is very diverse, ranging from cattle ranching, to poultry farming, to fruit orchards. Most of the agricultural activity is located in the southern regions of the Province, primarily around the Okanagan and the Kootenays. Fishing is more predominant in Northern B.C., around Prince Rupert, and the north of Vancouver Island. The fish canning industry is concentrated mainly in Vancouver, Richmond and Prince Rupert. Tourism is also an important economic driver for B.C. It accounts for about 4.4 per cent of the Provincial Gross Domestic Product, which is slightly more than the direct contribution of the mining industry. The Lower Mainland and Vancouver Island-Coast Regions account for more than half of travel expenditures, and Vancouver and Victoria are among the top 20 travel destinations in the world. The high-technology sector is gaining importance and has become one of the province's leading employers.

DEMOGRAPHICS

The British Columbia population is getting larger and older. The major factor driving population growth is migration to British Columbia. The ageing of the population is caused by a long-term historical decline in fertility rates. The baby boom that occurred between the end of World War II and the mid-sixties helped delay the onset of the full effect of this ageing. As these "boomers" reach retirement age, the ageing of the population will accelerate. As the population ages, the rate of natural increase will fall, which means that migration will become an even greater part of population growth in the future.

PROJECTIONS

Interprovincial migration levels have fallen substantially after several years of extremely large inflows. The provincial share of international migration has increased over the last few years and the higher levels are expected to be maintained for at least the short-term. As a result, population growth should persist, despite the drop in interprovincial migration.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 1000: EAST KOOTENAY

Municipalities in Regional District:
Cranbrook, Elkford, Fernie, Invermere, Kimberley, Radium Hot Springs, Sparwood

GENERAL ECONOMY

The East Kootenay region is one of the main centres of British Columbia's coal industry. The economy of the Fernie area, in particular, is driven by the coal industry with five major coal mines located there. As a result, the region is vulnerable to fluctuations in price and demand in the coal market, which are largely determined internationally. The Sullivan lead-zinc mine in Kimberley is the main economic driver for that area and forestry is the main driver in the Cranbrook and Windermere areas.

A major development that will affect this area is the impending shutdown of the Sullivan Mine in Kimberley. Restructuring of some of the coal mines as they begin to face depletion of reserves could also have a negative effect on the region over the long-term, although the area has good potential for new discoveries.

DEMOGRAPHICS

The median age of the region's population is slightly higher than the provincial median, but there is a significantly higher proportion of children in the regional population compared to the province as a whole. The gender ratio is weighted in favour of males, likely due to the predominance of male-dominated professions in the area. This is in contrast to the province as a whole, which has more women than men. Since men tend to have a shorter life expectancy than women, it is not surprising that the median age of death in this region is lower than the provincial median.

PROJECTIONS

The Sullivan Mine will close by 2001 and this will have a significant impact on the employment base of the area. In addition, depletion of coal reserves could cause the shutdown of several of the coal mines in the region. If world markets for coal are not sufficient to warrant construction costs associated with new mines, the diminishing employment base could result in out-migration from the area.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 3000: CENTRAL KOOTENAY

Municipalities in Regional District:
Castlegar, Creston, Kaslo, Nakusp, Nelson, New Denver, Salmo, Silverton, Slocan

GENERAL ECONOMY

Forestry is one of the main economic drivers for this region, particularly in the Castlegar and Arrow Lakes areas. Construction activity associated with the major dams in the area is another important economic driver.

There are major hydro-electric construction projects either underway, or planned for the near future, which should boost the employment base for this region, at least for the short term. The upgrading of the Waneta dam is already underway with the first unit completed and construction on the second unit to begin in 2000. The Keenleyside dam construction is also underway and the Brilliant dam is set to be upgraded and expanded as well.

DEMOGRAPHICS

Like many resource dependent regions in the province, this area experienced net migration outflows in the mid-eighties due to the downturn in the resource sectors. However, net migration to this region through most of the nineties was fairly high.

The median age of the population in this region is significantly higher than the provincial median age. This is reflected in the proportion of elderly in the population, which is higher than the corresponding provincial figure, but there are also proportionately more children as well.

PROJECTIONS

The construction activity associated with the dam upgrading and expansion should provide a boost in migration to this region, although following the period of construction, there will likely be an outflow as the construction force moves on. Nevertheless, net migration should be positive throughout most of the projection period. The net migration should more than offset losses due to an excess of deaths over births later in the projection and this will result in continuous population growth for this region.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 5000: KOOTENAY-BOUNDARY

Municipalities in Regional District:
Fruitvale, Grand Forks, Greenwood, Midway, Montrose, Rossland, Trail, Warfield

GENERAL ECONOMY

The Cominco Smelter at Trail is the main economic driver for this region. Most of the people working in the Trail area are either directly employed by Cominco, or work in a job providing goods and services that is directly or indirectly dependent on Cominco. In the Grand Forks and Kettle Valley areas, forestry is the main economic driver.

There are major hydro-electric construction projects either underway, or planned for the near future, which should boost the employment base for this region, at least for the short term. The upgrading of the Waneta dam is already underway with the first unit completed and construction on the second unit to begin in 2000. The Keenleyside dam construction is also underway and the Brilliant dam is set to be upgraded and expanded as well.

DEMOGRAPHICS

The median age of the population of this region is significantly older than the provincial median. As a result, the ratio of elderly (aged 65 and over) to working age population (aged 18 to 64) is also higher than the corresponding provincial ratio. However, the ratio of children (aged 17 and under) to working age population is also higher than the provincial ratio. This age structure is likely the result of layoffs in the resource sectors and at Cominco, that have forced those young workers with less seniority to move elsewhere to find jobs. Those left behind are generally older and more likely to have families.

PROJECTIONS

The construction activity associated with the dam upgrading and expansion should provide a boost in migration to this region, although following the period of construction, there could be an outflow as the construction force moves on. This region is expected to receive small net inflows of migrants over the projection period and this will lead to slow, steady population growth, although near the end of the projection the losses due to a negative natural increase (i.e., deaths outnumbering births) may outweigh inflows of migrants and there could be a slight population decline.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 7000: OKANAGAN-SIMILKAMEEN

Municipalities in Regional District:
Keremeos, Oliver, Osoyoos, Penticton, Princeton, Summerland

GENERAL ECONOMY

Agriculture has traditionally been the main economic driver for this region. Although this sector has diminished somewhat in importance, it is still an important factor of the economy, and this area remains one of the more important centres of agriculture in the province. Other significant economic drivers include tourism and forestry.

The two major mines in the area—the Similco Mine at Princeton, and the Nickel Plate Mine at Hedley—have shut down in the last few years. The mine at Hedley closed due to ore depletion, but the Similco mine still has reserves remaining and could re-open once copper prices improve.

DEMOGRAPHICS

Like the rest of the Okanagan, this region experienced tremendous growth in the last decade due to very high net migration inflows.

The pleasant climate of this area makes it a popular place to retire, and as a result, the median age of the population of this region is substantially higher than the provincial median age. The elderly dependency ratio (i.e., the ratio of those aged 65 and over to those aged 18 to 64) is over twice that of the province as a whole. The older age structure is responsible for the significant gender bias in favour of females, since women tend to live longer than men.

PROJECTIONS

The natural increase (i.e., the excess of births over deaths) is negative in this region, and will likely become even more negative over the projection period. However, it is expected that net migration to this area will continue to be high, which will more than compensate for losses due to a negative natural increase. The shutdowns in the mining sector will likely have only a small impact on the region as a whole. This area is high in mineral potential and there is a possibility of new mines opening once metal prices improve.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 9000: FRASER VALLEY

Municipalities in Regional District:
Chilliwack, Abbotsford, Harrison Hot Springs, Hope, Kent, Mission

GENERAL ECONOMY

In the areas furthest from Vancouver, agriculture and forestry are the main economic drivers. For the areas closer to Vancouver, the industrial base of Greater Vancouver is the main stimulus for the economy.

The agreement by the municipalities in the Greater Vancouver Regional District (GVRD) on a Livable Region Strategic Plan will also have consequences for this region. As the GVRD begins to put the infrastructure in place to promote its Growth Concentration Area, the recent trend of growth moving out into the Valley will likely slow considerably. Growth rates experienced in the last decade will be substantially higher than those experienced in the next.

DEMOGRAPHICS

Although this region is still far more rural than the neighbouring GVRD, the population density is four times that of the province as a whole. The more rural nature of the region is one of the reasons for the substantially higher total fertility rate compared to the provincial rate. As a result, the ratio of children (aged 17 and under) to working age population (aged 18 to 64) is significantly higher than the corresponding provincial ratio. The natural increase (i.e., the excess of births over deaths) is quite high for this region, with almost one and a half times the amount of births compared to deaths.

PROJECTIONS

Net migration to this region has been high in the last couple of decades, and this will likely continue to be the case in the future, due to the large availability of land. However, growth should be tempered as a result of the GVRD's Livable Region Strategic Plan, which will make more efficient use of land in the Growth Concentration Area and draw more people into urban Vancouver. Despite this, the combination of continued high natural increase and substantial inflows of migrants will result in strong population growth for this region.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

Population Extrapolation for Organizational Planning with Less Error

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 15000: GREATER VANCOUVER

Municipalities in Regional District:
Anmore, Belcarra, Bowen Island, Burnaby, City of Langley, Coquitlam, Delta, Langley DM, Lions Bay, Maple Ridge, New Westminster, North Vancouver City, North Vancouver DM, Pitt Meadows, Port Coquitlam, Port Moody, Richmond, Surrey, Vancouver, West Vancouver, White Rock

GENERAL ECONOMY

This region constitutes the economic heart of the province. Manufacturing, trade, and service activity in the Vancouver area are the main economic drivers for the region as a whole. Areas in the region outside of metro Vancouver are mainly residential and industrial suburbs.

The municipalities of the Greater Vancouver Regional District (GVRD) have come to an agreement on a Livable Region Strategic Plan. This plan designates a "Growth Concentration Area" where infrastructure such as rapid transit will be put into place to accommodate increased growth. This plan is certain to affect the growth patterns of this and neighbouring regions.

DEMOGRAPHICS

This is the most densely populated region in the province, over 100 times more so than the province as a whole. Although the region comprises only a small portion of the land base of the province, it contains almost half the population. For this reason, many of the demographic characteristics of the area are similar to those of the province as a whole, although due to the more urban nature of the area, the total fertility rate is significantly lower than the provincial rate.

Net migration to this area has been quite strong over the last twenty years, and it is projected that this will continue to be the case over the next two decades as well. The region can expect an additional one million people in the next 25 years.

PROJECTIONS

The GVRD's intention to go ahead with the Livable Region Strategic Plan will likely slow the current trend of growth outward toward the Valley and shift growth back into the urban core. As a result, this region will continue to experience strong growth and will remain the main population centre in the province.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

Terms and Conditions of Utilization of PEOPLE Projection Statistics

BC STATS, Ministry of Finance and Corporate Relations, Government of British Columbia, grants the user of the enclosed tables a non-exclusive, non-assignable, non-transferable license to use the data contained therein for information and analytical purposes. These data are provided for the exclusive use of the subscriber.

BC STATS will not be responsible for any errors, interpretive or otherwise, or erroneous conclusions drawn as a result of the use of these data.

REGIONAL DISTRICT 17000: CAPITAL

Municipalities in Regional District:
Central Saanich, Colwood, Esquimalt, Highlands, Langford, Metchosin, North Saanich, Oak Bay, Saanich, Sidney, Sooke, Victoria, View Royal

GENERAL ECONOMY

Victoria's status as the provincial capital means that the bulk of the government sector is located within Greater Victoria. As a result, the public sector is an important economic driver for this region. The pleasant climate of the area also makes it a popular tourist destination and retirement area. The abundance of retirees makes pension and investment income important elements of the economy. This, in combination with a large tourism trade, helps to drive the service sector.

Major developments that could affect this area include the recent construction of sewer lines and the improved transportation networks to the Sooke area. These developments could be an indication that the Sooke area may be ready for more serious development.

DEMOGRAPHICS

The urban nature of much of the region means that the population density is much greater than the provincial average. The median age of the area's population is much higher than the provincial median, due to the area's status as a retirement centre.

The larger percentage of elderly people affects other demographic variables as well. For example, the gender ratio is weighted much more in favour of females than is the case for British Columbia as a whole, since females tend to live longer than males.

PROJECTIONS

The retirement communities in Greater Victoria and the Gulf Islands should continue to grow as the provincial population ages and more people chose to retire in these areas. As Greater Victoria reaches saturation, growth will move into Saanich and Sooke. The Gulf Islands' "Island Trust" exists to ensure that the Islands maintain their character and this control over development will likely keep growth on the Islands to a minimum.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

Terms and Conditions of Utilization of PEOPLE Projection Statistics

BC STATS, Ministry of Finance and Corporate Relations, Government of British Columbia, grants the user of the enclosed tables a non-exclusive, non-assignable, non-transferable license to use the data contained therein for information and analytical purposes. These data are provided for the exclusive use of the subscriber.

BC STATS will not be responsible for any errors, interpretive or otherwise, or erroneous conclusions drawn as a result of the use of these data.

REGIONAL DISTRICT 19000: COWICHAN VALLEY

Municipalities in Regional District:
Duncan, Ladysmith, Lake Cowichan, North Cowichan

GENERAL ECONOMY

Forestry is the main economic driver for this region, but tourism and services related to the retirement community are also important. Many economic spin-offs arise from the region's location between the Capital Regional District and the Nanaimo Regional District. Several communities within the region serve as bedroom communities to either Victoria or Nanaimo.

Developments that could affect this area include possible cuts to the Allowable Annual Cut (AAC) of the various forest licenses in the region. Cuts to the AAC could have serious repercussions for individual communities within the region, particularly those with mills dependent on wood from the affected areas.

DEMOGRAPHICS

This region suffered some migration losses in the mid-eighties due to the downturn in the forest sector, but has had strong, positive migration otherwise. Due to a growing retirement community, the median age of the population has been getting older and has surpassed the British Columbia median age. The elderly dependency ratio (i.e., the ratio of those aged 65 and over to those aged 18 to 64) is significantly higher in this region than for the province as a whole, but the child dependency ratio (i.e., the ratio of those aged 17 and under to those aged 18 to 64) is also significantly higher than the provincial ratio. This is partly the result of a substantially higher fertility rate for this area compared to the province as a whole.

PROJECTIONS

This area has benefited from spin-off growth from both Victoria and Nanaimo and will likely continue to do so. It is projected that net migration will continue to be strong for this area, and as a result, the population should continue to expand.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 21000: NANAIMO

Municipalities in Regional District:
Nanaimo, Parksville, Qualicum Beach

GENERAL ECONOMY

Forestry is the primary economic driver in this region. The forest sector includes logging, lumber milling, veneer production, and pulp manufacturing. In addition to forestry, the service sector is an important segment of the economy. The City of Nanaimo is the main service and distribution centre for central Vancouver Island. The Qualicum area is a growing retirement centre, which also drives the service sector.

This region is currently experiencing a great deal of residential construction, with developments underway in Nanaimo and Parksville in particular. This is a reflection of the strong population growth experienced recently in this region.

DEMOGRAPHICS

Although net migration to this region declined in the mid-eighties and late-nineties during the downturns in the forest sector, it remained positive. This is likely due to the strong service sector in Nanaimo. The large amount of service sector jobs, combined with the substantial amount of retirees in the Qualicum area (i.e., since women tend to live longer than men), are likely the reasons why there is a gender bias in favour of females, unlike neighbouring regions that are more dependent on the forest sector and the male-dominated jobs within that sector. The retirement base is the reason why the median age of the region's population is significantly higher than the provincial median.

PROJECTIONS

Nanaimo's role as service centre for the central Island and the growing retirement base in the region should ensure that it continues to experience strong growth. It is projected that recent strong, positive net migration will persist in this area and it will continue to expand rapidly, growing in population by about 65 per cent over the next 25 years.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 23000: ALBERNI-CLAYOQUOT

Municipalities in Regional District:
Port Alberni, Tofino, Ucluelet

GENERAL ECONOMY

Forestry is the primary economic activity in this region, and as a result, the area is vulnerable to fluctuations in this sector. Fishing is another important resource-based industry in the region. The resource-based sectors have been experiencing supply problems in recent years, which has precipitated a push for growth in the tourism sector.

Developments in the forest sector are having a significant effect on this area. Reductions to the Allowable Annual Cut have reduced employment in harvesting and there have also been cutbacks at local mills. In the fishing industry, low levels of fish stocks could lead to restrictions on the size of the catch and the length of the fishing season, which could seriously affect the industry. On the positive side, projects in the tourism sector like the Reef Point resort at Ucluelet should help mitigate some of the effects of the downturn in the resource sectors.

DEMOGRAPHICS

This region has generally been a net loser of migrants and the trend is expected to continue as the economy is transformed from resource-based industries to more service-oriented industries.

The gender ratio for this region is weighted in favour of males, in contrast to the province as a whole, which has more females than males. This is likely due to the nature of the economy and the dependence on resource-based employment, which tends to be male-dominated. The proportion of elderly people (over 65 years of age) has increased to the point where it is similar to that of the province as a whole.

PROJECTIONS

It is projected that the traditional net migration outflows for this area will continue, particularly as constraints in the resource sectors reduce the employment base. Although there are plans to further develop the tourist industry and to attract more retirees to the region, the number of jobs in the service sector supported by these activities is significantly less than those supported by the forest sector. This means that it will take more than one tourism job to achieve the same spin-off benefits of one forest job. The end result should be a slight population decline for the area.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 25000: COMOX-STRATHCONA

Municipalities in Regional District:
Campbell River, Comox, Courtenay, Cumberland, Gold River, Sayward, Tahsis, Zeballos

GENERAL ECONOMY

Forestry is the most significant economic activity in this region. Some of the smaller municipalities, in particular, are highly dependent on the forest sector. Other important resource sectors in this region are mining and fishing. There are currently two major mines in the region: the Quinsam Coal Mine and the Myra Falls Mine, both near Campbell River.

Developments that will affect the population of this region include the closure of the pulp mill at Gold River, and the closures of the mines some time during the projection. The pulp mill closure will have a devastating impact on the town of Gold River and has already resulted in some population movement from the area. The mines are not scheduled to close for some time, but when they do, there will likely be a significant population impact. The Quinsam mine has experienced some major layoffs in the last year and there may be population impacts as a result.

DEMOGRAPHICS

The dependence on resource industries is likely the reason for the gender bias in favour of males in this region, since most of these industries tend to have male-dominated employment. The male gender bias is in contrast to the province as a whole, which has more females than males. Since men tend to have a shorter life expectancy than females, it is not surprising that the median age of death is lower in this area compared to the province as a whole.

PROJECTIONS

The diversity of the Courtenay and Campbell River areas should ensure continued net inflows of migrants to this region, despite the downturn in the forest sector and possible catch restrictions in the fishing industry. However, it is expected that growth at the pace experienced in recent years cannot be sustained, and although the population will continue to grow, it will be at a more moderate rate.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

Terms and Conditions of Utilization of PEOPLE Projection Statistics

BC STATS, Ministry of Finance and Corporate Relations, Government of British Columbia, grants the user of the enclosed tables a non-exclusive, non-assignable, non-transferable license to use the data contained therein for information and analytical purposes. These data are provided for the exclusive use of the subscriber.

BC STATS will not be responsible for any errors, interpretive or otherwise, or erroneous conclusions drawn as a result of the use of these data.

REGIONAL DISTRICT 27000: POWELL RIVER

Municipalities in Regional District:
Powell River

GENERAL ECONOMY

Forestry-related manufacturing is the main economic driver for this area. Pacifica Papers is the primary employer in Powell River, and this area is highly dependent on the fortunes of the mill. The area is trying to diversify its economic base by developing a retirement community at Powell River. The dependence on a single major employer has resulted in significant outflows in the past when the mill underwent downsizing, and anything that would help diversify the economy would certainly be beneficial in terms of population stability.

DEMOGRAPHICS

The gender ratio of this area is weighted in favour of males, in contrast to the province as a whole, which has more females than males. This is likely due to the dependence on the forest sector, which tends to be male-dominated. The median age of the population is higher than the provincial median, probably due to the efforts to attract retirees to the area.

PROJECTIONS

Although this area is attempting to diversify its economy, developments in the forest sector will continue to have important impacts. It is likely that economic cycles in the forest sector will continue to affect the employment base of the area and the net migration to this area, averaged over the long-term, is likely to be slightly negative. In the short-term, developments at the mill will likely result in population declines as layoffs occur. In addition, due to the ageing population, the natural increase (i.e., births minus deaths) is expected to become negative in the next few years. Combined with small net out-migration, this means that the population for this area will decline slowly over time.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 29000: SUNSHINE COAST

Municipalities in Regional District:
Gibsons, Sechelt, Sechelt Indian Government District

GENERAL ECONOMY

Forestry is the main economic driver for this area, with two large processing facilities at Port Mellon, and considerable employment in harvesting throughout the region. The area has also become somewhat of a retirement centre. The proximity to Vancouver, combined with relatively inexpensive housing, helps draw retirees to the area.

There are plans to upgrade the ferry transportation to this region, which will make the area more accessible and could lead to further population growth. As the baby boom generation reaches retirement, regions like this one could experience a burst of population growth.

DEMOGRAPHICS

This area has generally had positive net migration, particularly in the mid-nineties. In the last 25 years the population of the region has more than doubled. Due to the status of the region as a popular place to retire, the median age of the population is substantially higher than the provincial median. The ratio of elderly (aged 65 and over) to working age population (aged 18 to 64) is significantly higher than the ratio for British Columbia as a whole. This area also has a significantly higher total fertility rate compared to the province as a whole.

PROJECTIONS

The proximity to the Lower Mainland and the promise of improvements to the transportation network bode well for population growth in this area. As the baby boom generation reaches retirement, there will likely be increasing inflows of retirees to the area. The projection is for strong, sustained population growth over the term of the projection period.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note:
All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 31000: SQUAMISH-LILLOOET

Municipalities in Regional District:
Lillooet, Pemberton, Squamish, Whistler

GENERAL ECONOMY

Tourism has overtaken forestry as the main economic driver for this region, mostly on the strength of the ski resort at Whistler. The Whistler resort community has made efforts recently to expand its summer attractions in order to become an all-season tourist area, and this should reduce the seasonality of the resident population to some extent. The forest sector is still the dominant activity in the Lillooet area.

Developments that will affect the population in this region include several tourism-related projects including a couple of new resorts that are planned that could take some of the growth pressure off Whistler.

DEMOGRAPHICS

Migration to this area has been strong in recent years, particularly as Whistler grows in popularity as a tourist destination. The forest sector still dominates the economy and this is evident in the gender ratio, which is significantly biased in favour of males, since forest employment tends to be male-dominated. This is in contrast to the province as a whole, which has more females than males.

The median age of the population of this region is substantially younger than the provincial median, and this is due to a small proportion of elderly (aged 65 and over) compared to the province as a whole. The ratio of elderly to working age population (aged 18 to 64) is less than half the provincial ratio.

PROJECTIONS

This area has one of the fastest growing populations in British Columbia. As the burgeoning tourism industry continues to supplant forestry as the main economic activity, there will likely be more stable migration patterns, and the outflows in the early eighties will likely not be seen again. As the Whistler resort expands its operations to become an all-season resort, the seasonal variation in the resident population should be reduced. The projection is for strong, sustained growth for this region, with the population more than doubling in 25 years.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 33000: THOMPSON-NICOLA

Municipalities in Regional District:
Ashcroft, Cache Creek, Chase, Clinton, Kamloops, Logan Lake, Lytton, Merritt

GENERAL ECONOMY

Forestry is the main economic driver for this region, particularly in the North Thompson area. In the Kamloops area, mining is another important economic activity. There are two major mines currently operating in the area. The Highland Valley mine at Logan Lake is the largest in the province, employing over 1,000 people. The Blackdome mine near Clinton re-opened in 1998 after being closed for seven years, but has since shut down once again due to low gold prices. The mine will likely re-open once prices improve.

A development that will have a substantial impact on the population of this region will be the closure of the Highland Valley Mines. The magnitude of the mine will ensure that significant population impacts will occur. The mine is scheduled to close sometime around 2008.

DEMOGRAPHICS

Like many regions in British Columbia with a significant dependence on the resource sectors, this region experienced net migration outflows through the mid-eighties. Since that time, the population has been steadily growing. The gender ratio in this area is biased in favour of males, in contrast to the province as a whole where there are more females than males. The reason for this is the dependence on the male-dominated resource sector jobs.

PROJECTIONS

The closure of the Highland Valley Mines will have a significant effect on the population of this area, reducing migration inflows to the region for several years. However, the diversity of the region's economy will ensure that the net migration will remain positive and strong. The projection is for this region to continue to experience strong population growth throughout the projection period.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

P. E. O. P. L. E.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 35000: CENTRAL OKANAGAN

Municipalities in Regional District:
Kelowna, Lake Country, Peachland

GENERAL ECONOMY

The economy of this region is well diversified. Tourism, forestry, and agriculture all are important industries in the region. The warm climate makes this area one of the more important agricultural centres in the province and is one of the attractions for tourists. It also makes the region a popular retirement centre.

The stability of the agricultural and tourism sectors and the popularity of the region as a retirement centre should ensure continued growth for this region. The Coquihalla highway has made this area even more popular as a tourist destination, and the improved transportation links to the Lower Mainland have enhanced the Central Okanagan as a place to locate secondary industry.

DEMOGRAPHICS

High inflows of interprovincial migrants have resulted in the population of this area more than doubling in the last 25 years. This region was one of the highest growth areas in the province through the nineties.

Due to the presence of a large retirement base, the median age of the population is significantly higher than the provincial median. Since women tend to live longer than men, this also helps explain the bias towards females in the gender ratio. The ratio of females to males is significantly higher than the provincial ratio. The elderly dependency ratio (i.e., the ratio of those aged 65 and over to those aged 18 to 64) is significantly higher than the ratio for the province as a whole.

PROJECTIONS

The diversity of the economy and the pleasant climate make this area one of the more popular locations to move to in the province. This will likely continue to be the case for some time and this region can expect to continue to receive large net inflows of migrants throughout the projection period. As a result, population growth in this area will remain strong.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

P.E.O.P.L.E. Run 25, May 2000

REGIONAL DISTRICT 37000: NORTH OKANAGAN

Municipalities in Regional District:
Armstrong, Coldstream, Enderby, Lumby, Spallumcheen, Vernon

GENERAL ECONOMY

The economy of this region is fairly diversified. Forestry, agriculture and tourism all play important roles. The climate in this area is an attraction for tourists, as well as providing a suitable environment for agriculture. The stability of the agricultural sector has resulted in stable growth patterns for this region.

This region has been experiencing spin-off growth from the Central Okanagan, and as growth eases there, so too should growth in the North Okanagan.

DEMOGRAPHICS

Like many areas in British Columbia with an economic dependence on the forest sector, this region experienced net outflows of migrants in the mid-eighties when the forest sector was experiencing a downturn. Other than this exception, the area has generally had net inflows of migrants. The stability of the agricultural sector and the pleasant climate are contributory factors to population stability in this region.

The median age of the area's population is significantly higher than the provincial median, and the elderly dependency ratio (i.e., the ratio of those aged 65 and over to those aged 18 to 64) is also higher than the provincial ratio. However, the child dependency ratio (i.e., the ratio of those aged 17 and under to those aged 18 to 64) is also higher than the provincial ratio. Thus, the overall dependency ratio is over ten percentage points higher than it is for British Columbia as a whole.

PROJECTIONS

As with most of the Okanagan, this region has been experiencing strong growth in recent years due to large net inflows of migrants. This strong growth is projected to continue throughout most of the projection period.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 39000: COLUMBIA-SHUSWAP

Municipalities in Regional District:
Golden, Revelstoke, Salmon Arm, Sicamous

GENERAL ECONOMY

The economy of this region is based on forestry, tourism and services and construction related to rail transportation and hydro facilities. In the past, the Revelstoke area was the beneficiary of several mega-projects, and as a result, received large inflows of migrants. However, once the projects were completed, many of these people moved on, suggesting the construction activity was artificially propping up the population.

The resource sectors in this region have been struggling over the last few years with mill and mine closures occurring. The Evans Forest Products' mill (now owned by Louisiana-Pacific) at Golden has managed to keep afloat, which is good news for the community, but if it ever does shut down permanently, there will likely be significant population effects for this region. There are some promising mineral deposits in the region that could lead to future mine development.

DEMOGRAPHICS

This region experienced net outflows of migrants through the mid-eighties due to the downturn in the resource sectors. Net migration to the region has been high in recent years. The climate of the region has drawn a significant number of retirees, particularly to the Salmon Arm area, and as a result, the median age of the region's population is significantly higher than the provincial median.

Due to the dependence on the male-dominated resource industries, the gender ratio of this area is weighted in favour of males. This is in contrast to the province as a whole, which has more females than males.

PROJECTIONS

Losses in the forest and mining sectors will dampen migration to this area somewhat, but the location of the Salmon Arm area, just north of the North and Central Okanagan and east of Kamloops, should result in spin-off growth from those areas. As a result, migration to the region as a whole will likely be positive, although at lower levels than that experienced in recent years. The end result will be reasonably strong population growth for this region over the projection period.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

P.E.O.P.L.E. Run 25, May 2000

REGIONAL DISTRICT 41000: CARIBOO

Municipalities in Regional District:
Quesnel, Williams Lake, 100 Mile House, Wells

GENERAL ECONOMY

Forestry is the main economic driver for this region, but tourism, cattle ranching and mining also play significant roles in the economy. There is only one major mine left operating in the area after two shut down within a year. The Quesnel River gold mine opened in 1995, but was shut down in March 1998 due to poor metal prices. The Gibraltar mine near Williams Lake closed in February 1999 due to low ore grades and low prices. The remaining operating mine is the Mount Polley mine near Likely, which began production in 1997 and is expected to have about a 14 year life. There is also good potential for several other mines in this region. The Prosperity Gold/Copper Mine has the potential to be one of the largest mines in the province once it goes ahead.

Another major development that could affect this region is the eventual cancellation of the temporary licenses for beetle-killed timber in the Williams Lake Timber Supply Area. It is estimated that the timber attributable to this temporary uplift in the Allowable Annual Cut is responsible for over 500 direct jobs and 200 indirect jobs. The uplift was recently extended until about 2001, but will eventually be removed, and at that time significant employment effects will be felt in this region.

DEMOGRAPHICS

This region experienced net migration outflows through much of the eighties, probably due to the downturn in the forest sector. The temporary license for beetle-killed timber has helped boost employment in the forest sector and has attracted more people to the area in recent years. The dependence on male-dominated resource sector industries is the reason for a gender ratio that is weighted in favour of males, in contrast to the province as a whole, where there are more females than males. The median age of the population of this area is significantly younger than the provincial median. This is reflected in the child dependency ratio, which is significantly higher than the provincial ratio.

PROJECTIONS

This area could experience significant growth if the new mines come on line, although there will likely be outflows due to the recent closures. The cancellation of the temporary licenses for beetle-killed timber, when it occurs, could result in net outflows for a few years.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

Terms and Conditions of Utilization of PEOPLE Projection Statistics

BC STATS, Ministry of Finance and Corporate Relations, Government of British Columbia, grants the user of the enclosed tables a non-exclusive, non-assignable, non-transferable license to use the data contained therein for information and analytical purposes. These data are provided for the exclusive use of the subscriber.

BC STATS will not be responsible for any errors, interpretive or otherwise, or erroneous conclusions drawn as a result of the use of these data.

REGIONAL DISTRICT 43000: MOUNT WADDINGTON

Municipalities in Regional District:
Alert Bay, Port Alice, Port Hardy, Port McNeill

GENERAL ECONOMY

Forestry is by far the most important economic activity in this region, although fishing and tourism also play significant roles. The forest sector is dominated by logging activity, and also the pulp mill at Port Alice.

Developments in the resource sectors will likely determine the amount and direction of population growth in this area. The downturn in the forest sector, reductions to the commercial fishing fleet and downsizing by the Federal government have hurt this region and out-migration has resulted.

DEMOGRAPHICS

The dependence on the male-dominated professions in the resource sectors is the reason for the heavy weighting of the gender ratio in favour of males in this area, in contrast to the province as a whole, where there are more females than males. Since women tend to live longer than men, this partially explains the substantially younger median age at death compared to the province as a whole.

The median age of the population is also substantially younger than the provincial median and this is reflected in the child and elderly dependency ratios. The child dependency ratio (i.e., the ratio of those aged 17 and under to those aged 18 to 64) is significantly higher than the provincial ratio, while the elderly dependency ratio (i.e., the ratio of those aged 65 and over to those aged 18 to 64) is substantially lower than the provincial ratio.

PROJECTIONS

The long-term outlook for this region is for consistent net migration outflows. The natural increase (the excess of births over deaths) will offset the migration outflows for part of the projection period, but as the population ages and the natural increase declines, there will be some population decline.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

Terms and Conditions of Utilization of PEOPLE Projection Statistics

BC STATS, Ministry of Finance and Corporate Relations, Government of British Columbia, grants the user of the enclosed tables a non-exclusive, non-assignable, non-transferable license to use the data contained therein for information and analytical purposes. These data are provided for the exclusive use of the subscriber.

BC STATS will not be responsible for any errors, interpretive or otherwise, or erroneous conclusions drawn as a result of the use of these data.

REGIONAL DISTRICT 45000: CENTRAL COAST

GENERAL ECONOMY

Forestry, tourism and fishing dominate the economy of this sparsely populated region. Harvesting is the main activity in the forest sector as there are no large processing facilities in the area. The dependence on harvesting makes this region particularly prone to reductions in the Allowable Annual Cut. The AAC for the Mid Coast Timber Supply Area was reduced in 1992 and although no further cuts were made in the short-term, it is likely that the amount of timber available for harvesting will be further reduced over the long-term.

DEMOGRAPHICS

The population in this area is largely Native. The Native population tends to be younger, on average, than non-Natives, and as a result, the median age of the population in this area is substantially younger than the provincial median. There are proportionately far more children in the population, with the ratio of children (aged 17 and under) to working age population (aged 18 to 64) significantly higher than the provincial ratio. Also, the ratio of elderly (aged 65 and over) to working age population is significantly lower than the provincial ratio.

There are more men than women in this area, in contrast to the province as a whole, where the reverse is the case. The median age of death is substantially younger than for the province as a whole, and this is partly due to this gender bias in favour of men, who tend to have lower life expectancies than women, and partly due to the concentration of Natives, who tend to have lower life expectancies than non-Natives.

PROJECTIONS

This area has generally experienced small net outflows of migrants in the past, and this is expected to continue to be the case. The natural increase (excess of births over deaths) should offset the out-migration for at least the next ten years, although as the population ages, the natural increase will drop and there will likely be a slight population decline over time.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 47000: SKEENA-QUEEN CHARLOTTE

Municipalities in Regional District:
Masset, Port Clements, Port Edward, Prince Rupert

GENERAL ECONOMY

Fishing and forestry are the primary economic activities in this region. The Prince Rupert area has the largest concentration of fish processing facilities in the province outside the Vancouver region.

Developments affecting this region include cutbacks in the forest sector and the possibility of further restrictions to be imposed on the fishing industry in order to avoid depletion of salmon stocks. The Prince Rupert area has faced several difficulties in the last couple of years and there has been some significant movement from the area and this out-migration is likely to continue if there is no improvement in the resource sectors.

DEMOGRAPHICS

This region has generally experienced net migration outflows over the last 25 years. The natural increase (i.e., the excess of births over deaths) has offset the migration outflows to some extent, but in some years there has been a population decline.

The gender ratio for this area is substantially weighted in favour of males, in contrast to the province as a whole, which has more females than males. This is likely due to the dependence on male-dominated resource industries. Since men tend to have lower life expectancies than women, the median age at death is substantially lower than the provincial median. The overall median age is also significantly lower than for the province as a whole and this is reflected in the ratio of children (aged 17 and under) to working age population (aged 18 to 64), which is much higher than the provincial ratio, and the ratio of elderly (aged 65 and over) to working age population, which is much lower than the provincial ratio. Also, the total fertility rate in this region is substantially higher than the provincial rate.

PROJECTIONS

This region has generally experienced net outflows of migrants and it is expected that this trend will continue, particularly if the situation in the resource sectors worsens. However, the natural increase (i.e., the excess of births over deaths) should more than offset any losses due to migration, except in the short-term, and the population of this area should continue to grow as a result.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)
Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 woman (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 49000: KITIMAT-STIKINE

Municipalities in Regional District:
Hazelton, Kitimat, New Hazelton, Stewart, Terrace

GENERAL ECONOMY

Forestry and mining are significant economic drivers for this region. The Eskay Creek Mine near Stewart is one of the largest silver producers in the world. The Snip mine closed in the spring of 1999 due to ore depletion. The Alcan aluminum smelter at Kitimat is the main employer in that area and is the largest aluminum smelter in Canada outside Quebec.

There have been several developments affecting this region recently. The recent Nisga'a land claims settlement could have significant effects for the entire region, and the Nisga'a area in particular, but it remains to be seen what these effects will be. This area is high in mineral potential and several new mines are being considered, which could have significant employment impacts for the region. In addition, Alcan has reached an agreement with the government over compensation for the Kemano Completion Project, which could lead to another smelter being built in Kitimat. Also, the Cassiar TSA's Allowable Annual Cut underwent a threefold increase in the last AAC determination, which may create employment in Telegraph Creek and help supply the mills in Terrace, Prince Rupert and Kitimat.

DEMOGRAPHICS

The gender ratio for this region is heavily weighted in favour of males, in contrast to the province as a whole, which has more women than men. This is likely due to the predominance of male-dominated professions in the area. The median age of the population is substantially younger than the provincial median. There are proportionately far more children and far fewer elderly in the population compared to the province as a whole.

PROJECTIONS

This region is expected to experience moderate growth throughout the projection period from a combination of positive natural increase (excess of births over deaths) and positive net migration and there may be some bursts of growth as large projects such as a new smelter or mine come on line.

Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 51000: BULKLEY-NECHAKO

Municipalities in Regional District:
Burns Lake, Fort St. James, Fraser Lake, Granisle, Houston, Smithers, Telkwa, Vanderhoof

GENERAL ECONOMY

Forestry, tourism, mining and agriculture are the main economic drivers for this region. The agriculture industry in this region consists mainly of grain production. There are currently two major mines operating in the area (Endako Molybdenum Mine and Huckleberry Copper Mine). Smithers is also one of the major supply and service points for mineral exploration and development in northern British Columbia and miners working in fly-in-fly-out operations are often based there.

DEMOGRAPHICS

Due to the dependence on the male-dominated professions in the resource sectors, the gender ratio of this area is heavily weighted in favour of males. This contrasts with the province as a whole, which has more females than males.

The total fertility rate for this area is significantly higher than the provincial rate. This is likely one of the reasons for the significantly higher ratio of children (aged 17 and under) to working age population (aged 18 to 64) compared to the province as a whole. Conversely, the ratio of elderly (aged 65 and over) to working age population is lower than the provincial ratio. As a result, the median age of the population is substantially younger than the provincial median.

PROJECTIONS

This region is expected to receive net inflows of migrants throughout most of the projection, with the exception of one-time events such as mine closures. The natural increase (the excess of births over deaths) for this area is relatively high and positive, and in combination with positive net migration, this will result in steady population growth for this area.

Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 53000: FRASER-FORT GEORGE

Municipalities in Regional District:
Mackenzie, McBride, Prince George, Valemount

GENERAL ECONOMY

Forestry is by far the main economic driver for this region, with tourism playing a lesser, though still significant, role. Prince George is the main service centre of the northern interior of the province and the service sector is particularly important to the city's economy. Positioned as it is at the junction to the North to Alaska, the South to Vancouver, the East to Alberta and the West to Prince Rupert, Prince George experiences a great deal of tourist activity.

Developments in the forest sector will likely drive growth in this region in the future. This area is home to a large number of pulp mills and sawmills and it is crucial that the timber supply to this area is sustained if it is to maintain its job base. There have been a couple of mill closures in the last couple of years in this area and there will likely be some population impacts as a result.

DEMOGRAPHICS

The downturn in the forest sector in the mid-eighties was responsible for much of the net out-migration from the area at that time. In the mid-nineties the area received large net inflows of migrants. Some of this may be due to the construction of the University of Northern British Columbia in Prince George.

The median age of the population in this area is significantly lower than the provincial median, and this is reflected in the ratio of children (aged 17 and under) to working age population (aged 18 to 64), which is higher than the provincial ratio. Conversely the ratio of elderly (aged 65 and over) to working age population is significantly lower than the provincial ratio. The dependence on the forest sector and the male-dominated employment in the industry is likely the reason for the gender ratio that is weighted in favour of males.

PROJECTIONS

Although forestry is the main economic driver, the economy of this area is sufficiently diversified such that it can expect to continue to receive net migration inflows over most of the projection period with the exception of the next year or so. The natural increase (excess of births over deaths) is expected to be positive as well, which means the area will continue to experience strong, positive growth.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 55000: PEACE RIVER

Municipalities in Regional District:
Chetwynd, Dawson Creek, Fort St. John, Hudson's Hope, Pouce Coupe, Taylor, Tumbler Ridge

GENERAL ECONOMY

The economy of this region is fairly diversified, with coal mining, oil and gas exploration, forestry and agriculture all being significant economic activities. The North-eastern region of the province is a significant producer of oil and gas, and exploration in this sector has and will continue to employ a significant number of people. There are two major coal mines in the area (Bullmoose and Quintette) that supply coal to Japanese markets and potential for further coal projects exists.

A major development that will affect this region is the closure of the Quintette coal mine in August, 2000 and the likely closure of the Bullmoose coal mine in 2003. These mines have already experienced significant layoffs in the last two years. There have already been some population impacts from the layoffs and more are certain to follow. On the positive side, Louisiana-Pacific is in the process of building four processing facilities in the region.

DEMOGRAPHICS

Due to the dependence on the mining and forestry sectors, which tend to have male-dominated employment, the gender ratio for this region is weighted in favour of males. The total fertility rate is significantly higher in this area, and could partially explain the significantly higher ratio of children (aged 17 and under) to working age population (aged 18 to 64) compared to the province as a whole. As a result, the median age of the population is significantly lower than the provincial median.

PROJECTIONS

The increased activity in the oil and gas industry should result in some growth for this region, although it will be overshadowed in the short-term by the layoffs at the coal mines, which could result in out-migration for a couple of years. The long-term growth combined with a positive natural increase (the excess of births over deaths) will result in steady growth for the area in the long-term.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 57000: STIKINE

GENERAL ECONOMY

Mining, tourism and forestry are all important contributors to the economy in this region. In the forest sector, the threefold increase to the Allowable Annual Cut (AAC) of the Cassiar Timber Supply Area could have significantly positive repercussions for this area, and could result in relatively large inflows of population, particularly if a large processing facility is built. Even in the absence of the processing facility, the road construction that would have to coincide with the harvesting would open up the area and increase the potential for new mines and new communities.

DEMOGRAPHICS

This area is sparsely populated and this results in rather erratic demographic statistics. However, the remoteness of the area means that the age structure of the population is consistently younger than that of the province as a whole. The median age is significantly lower than the provincial median, and the ratio of elderly (aged 65 and over) to working age population (aged 18 to 64) is significantly lower than the ratio for the province as a whole. Another consistent statistic is that the gender ratio is heavily weighted in favour of males, in contrast to the province as a whole, which has more females than males.

PROJECTIONS

The developments in the forest sector should lead to substantial population growth for this area. Most of this increase will be driven by net inflows of migrants, drawn to the area by the increase in employment opportunities resulting from the increased AAC.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates
Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.

POPULATION EXTRAPOLATION FOR ORGANIZATIONAL PLANNING WITH LESS ERROR

British Columbia small area population projections result from the application of a "Component/Cohort-Survival" population model to area-specific assumptions dealing with fertility, mortality and migration. The Component/Cohort-Survival method requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. With this information, and with a base year age-specific estimate of population, a projection for any subsequent year is made by promoting each age group in the preceding year to the next highest age group, while at the same time taking into account the effects of net migration, deaths and births.

In general, all assumptions relating to migration, births and deaths by small area are based on past conditions, modified wherever possible to take into consideration possible future changes. Consequently, the resulting population projections are not necessarily what will be, but rather what could be, given the realization of these conditions. It is certainly possible that unforeseen changes in factors such as economic development, government policy, land use and zoning will affect future populations. Consequently, the projections should only be regarded as one possible scenario of the future size and age-sex structure of the population.

REGIONAL DISTRICT 59000: NORTHERN ROCKIES

Municipalities in Regional District:
Fort Nelson

GENERAL ECONOMY

Forestry, tourism and oil and gas exploration are the major economic drivers for this region. There are two large processing facilities located in Fort Nelson that employ close to 600 people between them. The North-eastern region of the province is a significant producer of oil and gas and exploration in this sector has and will continue to employ a significant number of people.

DEMOGRAPHICS

The economic dependence on the resource sectors and the male-dominant employment in these sectors is the main reason for the heavy weighting of males in the population in this area, in contrast to the province as a whole, which has more women than men. The remoteness of the area is likely the reason why the median age of the population is far lower than the provincial median. The total fertility rate is substantially higher than the provincial rate, and is likely partially the reason for a significantly higher ratio of children (aged 17 and under) to working age population (aged 18 to 64) compared to the province as a whole. There is a very small proportion of elderly in the population compared to British Columbia as a whole.

PROJECTIONS

The natural increase (i.e., the excess of births over deaths) will contribute between 60 and 90 people per year to the population base of this area. At the same time, it is expected that the area will experience small, positive net migration over most of the projection period. As a result, this area should experience steady population growth.

Prepared by: Population Section, BC STATS,
Ministry of Finance and Corporate Relations,
Government of the Province of British Columbia,
Using P.E.O.P.L.E. Projection Model, Projection 25.

Date run: May 18, 2000.
Prepared for: Ministry of Finance and Corporate Relations.
Enquiries: Population Section, BC STATS
Ministry of Finance and Corporate Relations, (250) 387-0327.

Note: All figures as of July 1.
Child Dep. = Pop(0-17) / Pop(18-64)
Elderly Dep. = Pop(65+) / Pop(18-64)

Households = Census Definition Households
Crude Dth Rate = Calendar year death estimates per 1000 population
TFR = Lifetime births per 1000 women (15-49), calculated on calendar year estimates

Sex Ratio = Males per 100 females

Figures for the period 2000-2026 are projected.
Due to rounding, the sum of the components of change may not equal the total population change.
